“A population Severance in Manipur at Depomine Receptor D2 Locus”

In a historic scientific Finding, specially for Kangleipak (Present Manipur since about 300 years ago) in the subject just written above by the writer, by a Research Team of Scientists consisting of Kallur N. Saraswathy, Yaiphaba M. Sanjenbam, Kiranmala N. Devi, Achoubi Devi Nongthombam, Somibabu Meitei Khangenbam etc. The Research Finding says “**Aims:** In this article, an attempt is made to understand the peopling of Manipur using three sites (Tag 1A, Tag 1B and Tag 1D) on the Depomine Receptor D2 (DRD2) gene through allele and haplotype frequencies and their distribution Patterns **Methods:** In total, 367 blood samples were collected from eight populations of which three (Meitei, Muslims and Bamon) are non-tribal groups and five (Aimol, Kabui, Paite, Kom and Thadou) are tribal groups. **Result:** All the three sites are polymorphic in all the studied populations with relatively lower heterozygosities indicating a **genetic discontinuity** between the populations of mainland India and Northeast India, suggesting the unlikeness of eastward migration of people from Africa through India **Conclusion:** High heterogeneity and Predominance of ancestral haplotype (B2D2A1) among the Meitei suggest an admixture of incoming mongoloid groups **with already existing Protoastroloids elements**. The study also highlights the **Distinctiveness of Manipur Population groups with respect to DRD2 gene Polymorphism.**”

This is the historic scientific Research Finding of the Research Team led by Kallur N. Saraswathy, in a very recent scientific Finding. In the above quotation please note “..... a **genetic discontinuity** between the populations of mainland India and Northeast India,....” and “.....an **admixture of incoming mongoloid groups with an already existing Protoastroloid element.**”

In the above quotation from the recent scientific Finding “..... a genetic discontinuity....” etc plainly and openly indicate in the history of Kangleipak since 18th century C.E., a Deceit, a cheating of a group of peoples from the Mayangs, less cultured scientifically, philosophically, socially by concocting, Fabricating Traditions, Mythologies etc of the Kanglei Meetei Peoples of Kangleipak.

We, the Peoples of Kangleipak specially the Meetei, were/are telling to the world that our Fatherland Kangleipak was/is not the Manipur of the Mahabharata, the Manipur of Mahabhat is still in Orissa in eastern Coast of Present India, we were/are not Descendants of Arjun of Mahabharat, a mainland Indian Hindu. Then what we are?

Of course, we belong to a human group, the Western People called very loosely “Mongoloid groups” in the 18th, 19th Century C.E. It is said that the Mongoloids, Mongolians came from the word ‘Mongolia’, a present country whose capital is Ulanbator, and its people Mongolian when they came to Mongolia and met the peoples of Mongolia in their colonial Expansion in Asia. The colonists did not know well the history and civilization of Asia and its Peoples. Now the peoples of Asia and mainly the pacific Inslanders including Japanese Peoples are known Mongoloid Peoples, loosely, very loosely.

“ a genetic discontinuity between the populations of mainland India and Northeast India” plainly and openly (as this statement of Findings says) mean not only differences in

Demographic Bio-data between the peoples of Kangleipak (Manipur) and the Peoples of mainland India, there is a complete difference in 'Gene' between the Hindu population of India and Kanglei Meetei peoples of Kangleipak (Present Manipur since 18th Century). This further means the two peoples of Kangleipak (Manipur), mainly the Meetei Peoples and the Hindu Peoples of mainland India are two peoples of different Genetic Origin. This is the recent Scientific Finding, an unrefutable statement of a fact of modern science. This is a time of Human Origin in Asia, not a time of 'out of Africa' theory, and 'Austroloid' theory and concepts are of out dated claims.

The peoples of Kangleipak, mainly the Meetei Race, is to be taken as the Descendants of an Earliest Distinct Human Group originated from the top of the Koubru Mountain termed by the present scientists as "an already existing Protoastroid element" Peoples. The claims of the writer is related to the Puya's 'Thouwaimichak Cheiyom Talet' a seven stars cluster having the life 'Kit's.

Now when the present writer asserts on the basis of present scientific Finding, Present Knowledge of Mahabharat Manipur's geographical position is in Orissa in the Eastern Coast of India, Kanglei Puyas infallible statement that there is a Seven Stars Cluster having life kits, that the Hindu mainland Indians cheated the Kanglei Peoples and the world peoples for the last 300 years by saying the present Manipur on the border of Myanmar is the Manipur of the Mahabharat and the Meetei Peoples (the Hindu calls Manipuri) are the sons and daughters of Mahabharat Hero Arjun (Descendants), that as all the claims of the Hindu Peoples of India are proved Fake scientifically, what the Hindu India will do now? If the present writer demands that The Hindu Peoples of India now should apologize to the Kanglei Peoples and to the Peoples of the World for their cheating the Kanglei Meetei Peoples who are the finest cultured people on the Earth, for the last 300 years since 18th Century, what the Hindu Mayang Group Responsible for this cheating will do?

There is one more thing which is very historic in the present scientific Research Finding for Kangleipak and its Indigenous People, the Meetei!

Generally upto this day of the Historic Finding of the Scientific Research Team led by Kallur N. Saraswathy, the words/concepts used in the subject of Human Origin is 'Protoastroid' thinking that Human Origin is from Africa. This is out-dated 'Out of Africa Theory, Present Prevailing Theory is 'Out of Asia' Theory, since 2012.

In the present Scientific Research Finding, the Scientists used the words/concepts 'Protoastroid' Please see what they say "Conslusion: High heterogeneity and Predominance of ancestral haplotype (B2D2A1) among the Meitei suggest an admixture of incoming mongoloid groups with an already existing Protoastroid element."

In the above quotation of the finding "The Meitei" is a Distorted word from the Original Racial name "The Meetei" of Kangleipak during the Hindu Rules of Kangleipak.

The "an already existing Protoastroid" in the Scientific finding, the words/concepts 'Protoastroid' are the first ancestors of the present Meetei Peoples, as we used the Meetei Race since very early B.C. "Protoastroid" is a compound word Proto+astro+loid Proto=Prototype, astro=astro, a concept related to stars, outspace etc, loid=may be livings beings or Human group. The Meetei of Kangleipak was the first Human group who knew the Extraterrestrial Origin of Life on the Earth.

The word/concepts "Thouwaimichak" is a Scientific word telling you The Scientific

fact of the Extraterrestrial Origin of Life (Please read the book, The Wakoklon Heelel Thilel Salai Ama-ilon Pukok and the Modern Science by the present writer)

The humble writer congratulates the scientist who used 'Protoastroloid' for the Indigenous Peoples of Kangleipak (Manipur), the Meetei Peoples.

The Scientific Finding further says "Though the present study is not exhaustive enough to comment on the various evolutionary histories, it is likely that the population movement from mainland India to East Asia through northeast region was difficult, if not impossible. Indian population in general and **Manipur Populations in particulars are very different and not much influenced by the ethnic, geographic, and linguistic affiliations and are to be dealt as unique breeding isolates with regard to their respective Genetic constitutions.**"

The above statement of the Scientific Finding unequivocally states that the population of Manipur in Particular from the Northeast India and the mainland Indian Populations in general are two things in Genetic Constitutions and in short, are two different things in all. The Kanglei Population Particularly the Meetei and the Indian mainland populations are two different things standing on two different locations on the Earth.

This scientific finding also cuts the root of the Indian theory that Present Manipur was Gateway of Indian Populations to Asia & Far East.

The Kangleipak, before Hindu Times since 18th Century, is never the Manipur of Mahabharat and the Meetei of Kangleipak can never be the Indo-Aryan Hindu Manipuri through Mahabharat Hero Arjun.

To conclude this article:

Who are the Yelhoumees (Indigenous Peoples) of Present Manipur of Indian Union which was Kangleipak before Hindu Times since the 18th Century C.E.?

The Yelhoumee (Indigenous Peoples) of Kangleipak, a hilly small country which was inhabited by the Direct Descendants of the Protoastroloid Homo Sapiens (Human beings) which first Inhabited on the Koubru Mountain Ranges of Kangleipak are the earliest peoples in Human History.

Kangleipak was a country, which was an established Political country, inhabited by the present Meetei Race who are Direct Descendants of the Protoastroloid Homo sapiens, several thousand years before the present Hindu Peoples of India's arrival to their Present Homeland India (Bharat). These things are all proved by the Direct Evidences of written Records.

Therefore, the Manipur and Manipuri in the Indian Hindu Records can never be the Indigenous Land's name and Indigenous Peoples' name. Only Kangleipak and the Meetei are Indigenous names of the small hilly country and the peoples. Manipur and Manipuri came only in the 18th Century C.E. with Pamheiba Garivaniwaz, the first Hindu King of Manipur.

Along with Kangleipak and the Meetei, the Seven Salais, Seven Primary Colours, etc. are the Real Indigenous.

Therefore, "This Act may be called the Protection of Manipur People Act 2015" is not a measure to protect the Yelhoumee.
